

LEATHER WALLAH

Premium Leather Footwear — Online Store

E-Commerce Platform Development Proposal

Prepared for Leather Wallah

Prepared by MD Saifulla Jubair

Project Type E-Commerce Website Development

Date June 2026

Version v1.0

Confidential — For Client Use Only

1. EXECUTIVE SUMMARY

This proposal outlines the development of a fully functional, production-ready e-commerce website for Leather Wallah — a premium leather shoe brand based in Bangladesh. The platform will allow customers to browse products, place orders with Cash on Delivery, and track deliveries in real time, while giving the Leather Wallah team complete control through a powerful Admin Dashboard.

Built on a modern stack (Next.js 16, Express.js, MongoDB) and fully optimized for the Bangladesh market — Pathao & Steadfast courier integration, BulkSMS OTP, Bangla font support, BDT currency, and server-side ad tracking via Meta & TikTok CAPI. Delivered within 7-10 business days.

2. PROJECT OVERVIEW

Field	Details
Project Name	Leather Wallah — E-Commerce Platform
Client	Leather Wallah (Bangladesh)
Project Type	Full-Stack Web Development
Delivery	7-10 Days from Contract Signing
Regular Price	BDT 50,000
Discount Price	BDT 20,000 (Limited Offer)

3. KEY FEATURES OF THE PLATFORM

The Leather Wallah platform includes the following features, organized by category:

Product & Catalog

- **Product images & videos** — Multiple images + videos per product
- **Dynamic attribute system** — Admin creates any attribute — size, color, material, pack, etc.
- **Per-variation pricing** — Each variation has its own price, discount price, stock, image, and video
- **SKU / Barcode / QR Code** — Unique identifiers assignable per product and per variation
- **Nested category tree** — Unlimited depth with per-category SEO fields
- **Brand management** — Brands with logo, description, and SEO fields
- **Search & smart filters** — Filter by price, size, color, brand, sort — real-time
- **Per-product SEO** — Meta title, description, and OG image per product
- **Reviews & Q&A** — Customer reviews, admin moderation, and seed review support

Cart & Checkout

- **Dual-storage cart** — Guest (localStorage) + logged-in (database), auto-merge on login
- **Coupon codes** — Fixed amount, percentage off, BOGO
- **Bangladesh location selector** — Division / District / City at checkout
- **Inside/outside Dhaka shipping** — Separate configurable shipping rates
- **Cash on Delivery** — COD-only checkout

Order Management

- **9-step order workflow** — Pending → Confirmed → Packed → Shipped → Delivered and more
- **Invoice generation** — Printable invoice per order
- **Customer order tracking** — Track by Invoice ID on a public-facing tracker page
- **POS — manual order creation** — Admin places orders for phone or walk-in customers
- **Delivery address override** — Admin can update address on existing orders
- **SMS on order confirm** — Auto SMS to customer via BulkSMS BD

Courier Integration

- **Pathao + Steadfast** — Send, track, sync, cancel, bulk-send — all from Admin
- **Webhook auto-sync** — Delivery status automatically updated from courier

Fraud Detection

- **FraudBD API** — Automatic risk rating per order — Low / Medium / High / New Customer

Customer Account

- **Phone + OTP registration** — BulkSMS BD for OTP delivery
- **Purchase history & tracking** — Full order list in customer dashboard
- **Wishlist & saved addresses**
- **Loyalty points & wallet** — Earn points, redeem via wallet balance

Marketing & Campaigns

- **Flash sale with countdown timer**
- **Campaign & bundle offer pages**
- **Banners & sliders** — Image, link, display order — managed from Admin
- **Newsletter subscribers** — Subscriber list with CSV export
- **Abandoned cart tracking** — View customers who left checkout without ordering

Analytics & Ad Tracking

- **Meta Pixel + Conversion API** — Browser + server-side CAPI for accurate tracking after iOS 14+
- **TikTok Pixel + Events API** — Browser + server-side tracking
- **Google Analytics 4 + GTM + Google Search console**

SEO

- **Server-side rendering** — Next.js 16 SSR/ISR — fast load, fully crawlable
- **Meta tags & Open Graph** — Per-page title, description, OG image
- **Auto sitemap.xml**
- **Product structured data (JSON-LD)** — Google rich results / product schema
- **Page SEO manager** — Admin can configure SEO for every page from dashboard

Admin Dashboard

- **Revenue dashboard** — Order count, revenue, top products, visual charts
- **Staff roles & permissions** — ~100 individual permission flags — full access control
- **Review moderation** — Approve, reply, manage all product reviews
- **FAQ management** — Site-wide FAQ section editable from Admin
- **Customer management** — Customer list, order history, wallet & loyalty point control

Site Settings (Admin)

- **Branding** — Logo, favicon, site title, tagline, social links
- **Home page layout manager** — Section ordering & on/off toggle — Banner, Flash Sale, New Arrivals, Featured Categories, Trending, Trust Cards, Promotional Banner, and more
- **Banner & slider manager** — Image, link, display order
- **Shipping rate settings** — Inside Dhaka, outside Dhaka, free shipping threshold
- **Analytics tracking IDs** — Meta Pixel ID, TikTok Pixel ID, GA4 ID, GTM ID — set from Admin
- **Chat widgets** — WhatsApp, Facebook Messenger, Live Chat — toggle from Admin
- **Policy pages editor** — About, Privacy, Return, Refund, Terms, Shipping — rich text editor
- **Currency & timezone**
- **Maintenance mode toggle**
- **Default SEO settings** — Global fallback meta title, description, OG image

4. PLATFORM BREAKDOWN

The Leather Wallah platform is built across three integrated applications:

4.1 Customer Storefront

A modern, mobile-first online store built with Next.js 16. Fast, SEO-optimized, and fully responsive across mobile and desktop. Customers can browse leather products, filter by size and color, add to cart, and checkout with Cash on Delivery. Real-time order tracking and a full customer account dashboard included.

4.2 Admin Dashboard

A complete business management panel where the Leather Wallah team manages products, orders, customers, marketing campaigns, and all site settings. Staff can be assigned specific roles with granular permission flags for secure, controlled access to each section.

4.3 Backend API

A secure, scalable REST API built with Express.js and TypeScript, connecting the storefront and admin panel to the database and all third-party services. Includes Pathao and Steadfast courier, BulkSMS OTP, FraudBD fraud detection, and Meta/TikTok server-side Conversion API for accurate ad tracking.

5. TECHNOLOGY STACK

Component	Technology	Details
Storefront	Next.js 16 (App Router)	SSR / ISR, SEO-optimized, fast page loads
Admin Panel	React 18 + Vite	Lightweight SPA dashboard
Backend API	Express.js + TypeScript	Type-safe, scalable REST API
Database	MongoDB + Mongoose	Flexible NoSQL database
Styling	Tailwind CSS + Shadcn UI	Responsive, mobile-first design
State	Redux Toolkit + RTK Query	Client state and API data management
File Storage	Contabo Object Storage	Images and videos with CDN delivery (S3-compatible)
Auth	JWT + httpOnly Cookie	Secure, XSS-resistant sessions

The platform is built using modern technologies to ensure speed, security, scalability and future expansion.

6. DELIVERY TIMELINE

The complete platform will be delivered within 7-10 days from the date of contract signing and advance payment receipt.

Milestone	Target
Project Setup & Configuration	Day 1-2
Core Development (All 3 Apps)	Day 3-7
Testing & Quality Check	Day 8-9
Deployment & Client Handover	Day 10

7. INVESTMENT & PRICING

Regular Price: ~~BDT 50,000~~

Special Offer: **BDT 20,000**

This investment covers the complete development and setup of the platform, including:

- Full platform development — Storefront, Admin Dashboard, and Backend API
- 3 months of technical support after delivery
- All third-party integrations — Pathao, Steadfast, BulkSMS, FraudBD, Meta & TikTok CAPI
- Deployment and go-live assistance
- Admin panel training and handover
- Future feature updates — Bug fixes and minor improvements included. Major feature development will be estimated separately.

Payment Terms

- **BDT 10,000** — 50% advance before work begins
- **BDT 10,000** — 50% upon delivery and approval
- **bKash, Nagad, Bank Transfer** — Accepted payment methods

8. CLIENT REQUIREMENTS

To deploy and run the Leather Wallah platform, the client needs to arrange the following before the project goes live. These are third-party services paid directly by the client and are not included in the project price.

8.1 VPS Hosting — Contabo Cloud VPS

We recommend the following Contabo VPS plan for optimal performance:

Spec	Details
CPU	4 vCores
RAM	8 GB
Storage	75 GB NVMe SSD
Object Storage (S3)	250 GB Contabo Object Storage (S3-compatible, for images & videos)
OS	Ubuntu 22.04 LTS
Contract	12 months (best price)

Order link:

<https://contabo.com/en/vps/cloud-vps-10/?addons=1958,2015&object-storage=object-storage-250gb&image=ubuntu.332&qty=1&contract=12&storage-type=cloud-vps-10-75-gb-nvme>

8.2 Domain Name

The client must register a domain name for the website (e.g. leatherwallah.com or .com.bd). Domains can be purchased from Exabytes BD, Namecheap, or any local registrar. Once registered, the domain will be pointed to the Contabo server during deployment.

8.3 Third-Party Service Accounts

- Pathao merchant account (for courier)
- Steadfast merchant account (for courier)
- BulkSMS BD account (for OTP and order SMS)
- Meta Business Manager (for ad pixel)
- TikTok Business account (for TikTok Pixel) -- if applicable

9. TERMS & CONDITIONS

- **Ownership** — Upon full payment, the client has full rights to use and operate the delivered platform.
- **Timeline** — The 7-10 day delivery begins when advance payment is received and all required credentials are provided.
- **Revisions** — Up to 3 rounds of revisions are included during development. Changes after handover are quoted separately.
- **Technical Support** — 3 months of technical support are included after delivery.

Included:

- Bug fixing
- Deployment issue
- Server configuration

Not included:

- New features
- Content upload
- Marketing

- **Future Updates** — If the core platform receives major updates or improvements, the client will receive those updates.
- **Hosting Costs** — Domain, VPS, and third-party service costs are paid directly by the client and not included in the project price.
- **Confidentiality** — Both parties agree to keep project details, pricing, and credentials confidential.
- **Cancellation** — If the client cancels after development has started, the 50% advance is non-refundable.

10. WHY CHOOSE US

This is not a template or a basic website. It is a fully custom, production-grade e-commerce platform built specifically for the Bangladesh market. Here is what makes it different from anything available in the local marketplace:

- **Server-Side Ad Tracking (CAPI)** — Most agencies only add a browser pixel. We integrate Meta and TikTok server-side Conversion API -- meaning your ad data stays accurate even after iOS 14+ privacy changes. Advanced tracking features that are usually found in enterprise-level ecommerce platforms.
- **Built-in Fraud Detection** — Every order is automatically checked against FraudBD -- a Bangladesh-specific fraud database. You get a risk score (Low / Medium / High) before shipping, reducing fake COD orders and protecting your revenue.
- **Pathao + Steadfast -- Fully Integrated** — Send parcels, track, sync delivery updates, cancel, and bulk-send -- all from within Admin panel without logging into courier portals separately.
- **~100 Permission Flags -- Full Staff Access Control** — Assign specific roles to each staff member with granular permissions. This level of control is not found in any marketplace theme or basic e-commerce solution.
- **Dynamic Attribute System** — Attributes are not hardcoded. Admin can create any attribute -- and each variation can have its own price, discount price, stock, image, and video independently.
- **Abandoned Cart Tracking** — See exactly which customers added products but did not complete their order -- so you can follow up and recover lost sales.
- **Loyalty Points & Wallet System** — Customers earn points on purchases and redeem them via a built-in wallet -- increasing repeat orders and customer retention.
- **Home Page Layout Manager** — The admin can reorder, enable, or disable any section of the home page from the dashboard -- no developer needed for layout changes.
- **Exceptional Value -- BDT 20,000 for a Full Platform** — A platform of this scale would cost BDT 80,000-150,000+ from a software company. We deliver the same production-grade quality at a fraction of the cost.
- **Future Updates Included** — This is an actively maintained platform. If new features are added or the platform is improved, you receive those updates -- your website grows with the platform.

11. NEXT STEPS

To get started, confirm your acceptance of this proposal and make the 50% advance payment. Development begins immediately. Please also begin setting up your Pathao, Steadfast, and BulkSMS accounts and register your domain so everything is ready for deployment on Day 10.
